

## Jurusan Teknologi Informasi Politeknik Negeri Malang

# Tugas Minggu-10: Filter Spasial Low Pass Filter, High Pass Filter, Point Detection, Line Detection, Edge Detection Mata Kuliah Pengolahan Citra dan Visi Komputer

Pengampu: Dr. Eng CAHYA RAHMAD., ST., M.KOM.

April 2021

### <u>Tujuan</u>

- 1. Mahasiswa mampu memahami konsep Filter Spasial.
- 2. Mahasiswa dapat mengetahui beberapa jenis Filter Spasial.
- 3. Mahasiswa dapat membuat filter sederhana menggunakan filter Kernel yang tersedia dan melakukan perhitungan konvolusi.

### <u>Praktikum</u>

Buatlah fungsi konvolusi menggunakan algoritma yang telah dijelaskan pada Bagian C, tanp menggunakan library atau metode konvolusi dari OpenCV.  Berikut merupakan langkah-langkah yang dapat dilakukan:  Buat notebook baru pada google colab, dan beri nama Week7.ipynb. Simpan Salinan pada akun github seperti pada modul sebelumnya.  Buatlah fungsi konvolusi. Catatan: parameter yang digunakan boleh dimodifikasi. Misal, hanya menggunakan parameter image dan kernel saja, atau image, kernel, dan padding.

• Load citra yang akan diproses dan ubah menjadi citra keabuan.

• Tentukan kernel yang akan digunakan, contohnya kernel untuk filter sharpening sebagai berikut:

 Memanggil fungsi konvolusi yang telah dibuat sebelumnya, dan menampilkan hasil konvolusinya:

### • Canny Edge Detection

#### • 21x21 Gaussian Blur
